

Solar Jaimee Lee

Price list

Package	Price	Included
1. Solar System Check	£120	A focused call-out for inspecting an existing domestic solar installation or resolving a small visible issue. Suitable for basic checks, minor adjustments and straightforward service work. • Initial system inspection • Basic panel and cable check • Minor adjustment where practical • Findings explained on completion
2. Small Roof Solar	£450	A compact solar panel installation for a small home, extension or garden office with limited suitable roof space. The package covers a modest array and its essential connection equipment. • Small roof-mounted panel array • Domestic inverter installation • Mounting rails and roof fixings • System testing and handover
3. Family Home Solar	£1,200	A practical solar installation for a typical Blackpool family home, using a larger roof layout to generate more of the property's daytime electricity. • Multi-panel domestic array • Roof layout and shading review • Inverter and internal cable routing • Testing and operating guidance
4. Large Home Array	£2,400	A higher-capacity installation for a larger house with generous roof space or above-average electricity use. The design allows the available roof area to be used more extensively. • Expanded residential panel array • Detailed roof and access planning • Inverter and protection equipment • Full installation-area clean-up
5. Home Solar and Battery Ready	£3,300	A substantial residential solar system planned around household demand and future energy storage considerations. It is suited to larger properties seeking a more comprehensive renewable electricity setup. • High-capacity domestic panel layout • Battery-ready system planning • Dedicated inverter installation • Electrical testing and handover
6. Solar for Small Business	£4,800	A commercial solar installation for a small shop, workshop, office or similar premises. The system is planned around roof access, working areas and the building's daytime electricity use. • Commercial roof panel arrangement • Workplace access and cable planning • Inverter and distribution connection • Site testing and system handover

Package	Price	Included
7. Multi-Roof Commercial Solar	£7,500	A larger solar project for business premises with more than one usable roof section or a higher electrical demand. The installation coordinates panel layouts and equipment across the building. • Multi-section commercial array • Roof-by-roof layout planning • Extended cable and inverter arrangement • Coordinated testing across the system
8. Large Commercial Solar Array	£9,800	A major installation for a warehouse, office block, retail building or other sizeable commercial property. The scope covers a broad roof array designed around the building's available space and electrical setup. • Large commercial panel field • Detailed equipment and cable routing • Multiple inverter arrangement where required • Structured testing and handover documentation
9. Whole-Building Solar Installation	£13,500	A comprehensive solar installation for a large commercial or multi-use building with extensive roof space and significant electricity demand. The project includes coordinated planning and installation across the property. • Whole-building solar layout • Multiple roof and access zones • Commercial inverter and electrical integration • Full system testing and operational handover
